Experience

Android Developer

Reports Shield LLC, Remote (US)

January/2019 – Present

(Available on [Google Play Store](#))

Conceptualized, designed, developed and deployed a fully functional native mobile android application for 7al Net News website which has 1 million views per month in the Middle East and globally.

- Developed the application using Java and the latest Android SD. Followed MVC and OOP as a design pattern and programming paradigm.
- Implemented third-party libraries to make development easier and faster including Volley for Networking HTTPS to fetch content from WordPress REST API. Glide for image downloading, OneSignal for Push notification, Google Analytics, and Firebase FCM.
- Used SQLite database API to implement Bookmarking feature in which the user can save articles to read later.
- Used Git and GitHub to host the source code and Jenkins pipeline for Continuous Integration and Continuous Development resulting in automatic feature build and integration to the Google Play Store.
- Used Trello Board website to write, organize and finish the tasks.
- Continuously documenting the code and writing a technical documentation for the client.
